

Accuride Hub-Piloted Mounting Systems. Designed To Deliver Performance Over The Long Haul.

We produce more wheels for more applications than any other other manufacturer in North America - including wheels for both hub-piloted and stud piloted mounting systems. We are also leading the industry in wheel design and development. You'll find our wheels installed on most of the trucks and trailers on the road today - and for good reason. Our wheels are designed and manufactured to be the best wheels around.

Hub-Piloted Mounting System

Features

Hub-Piloted wheels use two-piece flange nuts.

Non-chamfered bolt holes identify a hub-piloted wheel.

Cross section of typical dual assembly with hub-piloted wheels. (Right hand threads only).

Benefits

- Elimination of bolt hole chamfer wear
- Greater clamping force for a given torque
- Reduction in nut wear and nut replacement
- Elimination of left hand threaded hardware
- More consistent nut torque retention
- Elimination of inner cap nuts
